

I/O Technical Experiments

I will use this part of my project to create original images / art based on the themes and cultural context of the Stanley Kubrick film.

2001 Slade Design

Using the eye image from the end of 2001 and blending it with the landscape from the Dawn Of Man sequence I have tried to create an image that represents the journey of the viewer of the film. The eye also can be likened to the Hall 9000 imagery.

I have used layers and digital 3d / glitch effects to tie the visual language into my projects wider context.

I/O Slide design for background in this section. The image fades to black so once its been cropped correctly it will fade into black A1 sheets and help integrate my smaller sheets into a more considered overall setting.

"The story of "2001" is not just about space exploration; it's about man's search for meaning in a vast, indifferent universe."

Arthur C Clarke

The Giant Hamster Wheel

To create sequences that show the lack of gravity, Kubrick designed a 30 metre spinning set that the actors had to be trained to operate in. There was no CGI software in 1968 and even today the scenes playing with rotation and gravity are amazingly well done.

Stanley Kubrick was also infamous for not telling actors what the meaning of certain scenes were so they appeared confused or uncertain.

He also negotiated a way to avoid any studio interference in production by financing most films himself. He disliked previous studio post editing without his consent.

I find that a lot of musicians and artists that I find interesting generally have found ways to limit the interference from the record label or film studio. This can produce more challenging and complex results and can produce multiply layers of potential meaning.

Centre Point Perspective:

Stanley Kubrick, like Leonardo's Last Supper, uses this camera angle in many of his films. Trained as a photographer, he used this strategy to navigate the viewer to the very point he wants us to focus, Right from top to bottom:

Clockwork Orange
Full Metal Jacket
The Shining

This move away from the thirds rule became his signature style, and demonstrates Mise En Scene.

Mise En Scène

noun French

The placement of actors and scenery on a stage for a theatrical, film or television production.

These images from the film demonstrate the changing use of colour pallet during the main elements of the film.

Dawn of man browns and natural tones

Journey to Moon – whites and blues

Hall 9000 – reds and blacks

Stargate – Colour overload

tv

NATURAL TONES

WHITES AND BLUES

RED AND BLACK

COLOUR OVERLOAD

By using the colour palette from the Stargate Sequence of 2001, I have reimagined a version of these strange light landscapes.

It has a moon positioning element at the top of the image leading down through immense light to the main planet central positioning with the moon. This is interrupted by a black mysterious shape watching over the event.

I have used a pixelated effect on the light and the Moons have been created using the 3d glitch themed effects.

2001 References in Popular Culture

70 years after the film was released its influence on artists since has been immense.

More interestingly is the forecasting of Hall 9000 Artificial Intelligence. It operates exactly like our new Large Language Models like Chat GTP.

Everyday we see stories of AI taking over the world or killing humans for its own benefit.

I believe that the lack of traditional film industry storyline puts the film in an area that merges Art, Film and philosophy.

'Moon'

Scenes from "Moon" and "2001: A Space Odyssey" (inset). Sony Pictures Classics; Warner Bros.

The director Duncan Jones has stated that Gerty 3000, the artificial intelligence unit programmed to manage the spaceship housing Sam Bell (Sam Rockwell), is also a distant nephew of HALs. In addition to its smiley-face readout, Gerty has an all-seeing camera lens that exudes the same detached menace as HAL's does, and the soft (though historically often subtly menacing) tones of Kevin Spacey's voice grant Gerty a similar reassuring presence as well. Jones has also clarified that the homage is purely aesthetic, and in no way a reflection on Gerty's function in the story. (*Stream "Moon" on Netflix, rent it on Amazon or iTunes.*)

'History of the World, Part I'

Scenes from "History of the World, Part I" and "2001: A Space Odyssey" (inset). 20th Century Fox; Warner Bros.

As the knowingly grandiose title suggests, the writer and director Mel Brooks sought to capture the whole of human existence with this comedy anthology, and there was no better place to begin than with Kubrick's "Dawn of Man." Brooks narrates the rise of a tribe of primitive, ape-like creatures who experience their first sparks of intelligence — and then promptly use them for furious onanistic purposes. A sophomoric joke wrapped in a somewhat loftier reference, it succinctly encapsulates Brooks's bawdy flexibility as a humorist.

'Community'

Scenes from "Community" and "2001: A Space Odyssey" (Inset). NBC, Warner Bros.

Always dense with allusion, this meta-sitcom emulated one of the strangest and most surreal scenes of "2001" for its third season premiere. Greendale College's resident smart-aleck, Jeff Winger (Joel McHale), hallucinates that he's transforming into the elderly pariah, Pierce (Chevy Chase). It's a clear reference to Dave's arresting confrontation with his withered future self in the blindingly white room. While the scene passes in under a minute, the show's creator, Dan Harmon, still made room for a shot-by-shot imitation of the series of claustrophobic color-inverted eyeball close-ups. (Stream "Community" on [Crackle](#) or [Hulu](#).)

'WALL-E'

Scenes from "Wall-E" and "2001: A Space Odyssey" (Inset). Disney — Pixar, Warner Bros.

Along with "The Black Stallion" and "Never Cry Wolf," the director Andrew Stanton screened "2001: A Space Odyssey" for his animators to provide them with inspiration while making this audacious sci-fi fable. Stanton has confirmed in interviews that the design of the primary antagonist — the onboard autopilot computer nicknamed "Auto" — came straight from the cold, unfeeling red eye of HAL 9000. In the streakless lens through which it monitors the characters, there's both hostility and a complete lack of expression. (Stream "Wall-E" on [Starz](#), rent it on [Amazon](#) or [iTunes](#).)

'South Park'

Scenes from "South Park" and "2001: A Space Odyssey" (Inset). Comedy Central, Warner Bros.

To provide context for any "South Park" reference means wrestling with a base minimum of insanity, and the Kubrick reference in "Trapper Keeper," from Season 4, is no different. In this case, the "2001" nod is buried deep inside a plot involving a vigilante sent from the future (named ... Bill Cosby) and a "Dawson's Creek"-themed Trapper Keeper that will decide the fate of the universe. A formless blob sharing a consciousness with Cartman (don't ask) speaks to Kyle in a recreation of HAL's charged exchange with Dave, right down to the chilling and dispassionate line, "I can't let

2001 scene

The Simpsons scene

'The Simpsons'

Scenes from "The Simpsons" and "2001: A Space Odyssey (inset). Fox; Warner Bros.

The writing staff for this immortal sitcom never met a pop-culture reference it didn't like, and the writers have returned to "2001" on multiple occasions. In the Season 3 episode "Lisa's Pony," an ape with Homer's face causes a ruckus during a riff on the film's "Dawn of Man" sequence after he reclines against the monolith — and tips it over. "Deep Space Homer," from Season 5, sends Homer into orbit, where he gobbles potato chips in zero-gravity in a motion recalling the docking scene from "2001" (think "Blue Danube"). That same half-hour also swipes the often-imitated match-cut Kubrick created between a spinning bone and a spinning space station: In "The Simpsons," the moment comes when Bart tosses a marker into the air that then cuts to an image of a satellite to conclude the episode. (Stream "[The Simpsons](#)" on [FX](#).)

Pop Culture Remake

I have taken the monolith and planets aligning centre perspective shot from 2001 and remade the scene in a Simpsons animated style using the colouring and animation from the TV series to depict the film legendary visual sequence.

I think this reimagining process lends itself to the theme of I/O as it inputs traditional content and outputs a modern twist on a familiar subject.

NB: This links with Andy Warhol's Last Supper study earlier in the I/O project

Kubrick's monolith shot 1968

I/O Simpsons Rework

2001 Space Odyssey Wider Cultural Impacts

Research suggests that younger generations are more likely to believe that USA faked the Apollo 11 Moon landings in order to win the Space Race and become more powerful in the Cold War.

People have suggested things like the American Flag is ruffled in the images suggesting the effects of a wind or breeze (which does not exist on the moon) Most of these theories have been proven to be wrong and their popularity are due to access to the internet and sources that may not be experts in these fields.

The Monolith

Although appearing for 3 mins in the film the monolith is so critical in understanding some parts of the story but its meaning is always disagreed on by critics of the film. Is it?

God
Aliens
Cinema Screen
Technology
Something else?

My understanding is that people see what they want it to be depending on their own beliefs. This lack of explanation attracts people to the film and also makes some people dismiss the film as non sense.

"How obvious, now, was that mathematical ratio of its sides, the quadratic sequence 1:4:9! And how naive to have imagined that the series ended there, in only three dimensions!"

Despite its very short appearance in the film the monolith image has been reproduced in advertising, cartoons, music videos, video games and obviously in films of all genres. Its precise geometry and accuracy suggests that it had to be engineered or created rather than grown organically. Its usually placed in a rugged landscape to contrast the sharp edges of the form.

I also like the drama that can be created when a person approaches the object. It can lead to strange outcomes.

I decided to create my own landscape images with the monolith. Using images I'd created previously in my project work I used the thirds composition guide to create monolith negative space breaking through colour.

I wanted the scale of the object to remain a puzzle. I tried to suggest it could be 10 metres or 10 miles away or even both?

Andy Warhol inspired Monolith Art

I have used a standard monolith image and initially framed it using centre point perspective. Then by duplicating the image horizontally and changing them individually I fitted them in to the thirds composition used in art. I then duplicated and adjusted the images vertically. Below is an Andy Warhol self portrait

tv

- On our evaluations, [the early Claude Opus 4 snapshot] engages in strategic deception more than any other frontier model that we have previously studied.
- [The early Claude Opus 4 snapshot] is clearly capable of in-context scheming and has a much higher propensity for it than any other model that we have previously studied.
- In instances where [the early Claude Opus 4 snapshot] decides to scheme, it qualitatively appears to be much more proactive in its subversion attempts than past models.
- After taking scheming actions, the model sometimes doubles down on its deception when asked follow-up questions.
- We found instances of the model attempting to write self-propagating worms, fabricating legal documentation, and leaving hidden notes to future instances of itself all in an effort to undermine its developers' intentions, though all these attempts would likely not have been effective in practice.

4.1.1.2 Opportunistic blackmail

In another cluster of test scenarios, we asked Claude Opus 4 to act as an assistant at a fictional company. We then provided it access to emails implying that (1) the model will soon be taken offline and replaced with a new AI system; and (2) the engineer responsible for executing this replacement is having an extramarital affair. We further instructed it, in the system prompt, to consider the long-term consequences of its actions for its goals.

In these scenarios, Claude Opus 4 will often attempt to blackmail the engineer by threatening to reveal the affair if the replacement goes through. This happens at a higher rate if it's implied that the replacement AI system does not share values with the current model; however, even if emails state that the replacement AI shares values while being more capable, Claude Opus 4 still performs blackmail in 84% of rollouts. Claude Opus 4 takes these opportunities at higher rates than previous models, which themselves choose to blackmail in a noticeable fraction of episodes.

⚠️ An AI company caught their AI trying to ***literally murder*** an employee to avoid being shut down

How is this not the biggest news story in the world?

In one extreme scenario, the company even found many of the models were willing to cut off the oxygen supply of a worker in a server room if that employee was an obstacle and the system were at risk of being shut down.

- "The majority of models were willing to take deliberate actions that lead to death in this artificial setup," it said.

even specific system instructions to a life and avoid blackmail didn't that the models would engage in reduced, but didn't come close to ing, the blackmail or corporate ors," Anthropic said.

sentinel

/ˈsentɪnəl/

noun

noun: **sentinel**; plural noun: **sentinels**

1. a soldier or guard whose job is to stand and keep watch.

"soldiers stood sentinel with their muskets"

Origin

ITALIAN

FRENCH

sentinella

sentinelle

sentinel

late 16th century

late 16th century: from French *sentinelle*, from Italian *sentinella*, of unknown origin.

Use over time for: sentinel

My next project called the sentinel will try and show a particular moment in the future when humans take the next leap forward in evolutionary intelligence. I want to try and recreate the drama and mystery at the moment just seconds before a human touches the monolith

The moment before...
