media

[I/O Study]

Space Colony Environmental Risks

How is life supported?

How do we organize communities?

Physical & Mental Health Issues?

Do we replicate Earth's

Economic / Political Structures?

Input Risk:
Limited social opportunities / freedoms /
access to culture / limited human
expression and individuality
Output Solution:
Changes in culture

Input Risk:
Starvation
Output Solution:
Space Farms

Input Risk:
Law & Order
Output Solution:
Civic Structural services

I/O Summary:
Focus on garments and buildings
essential for life support

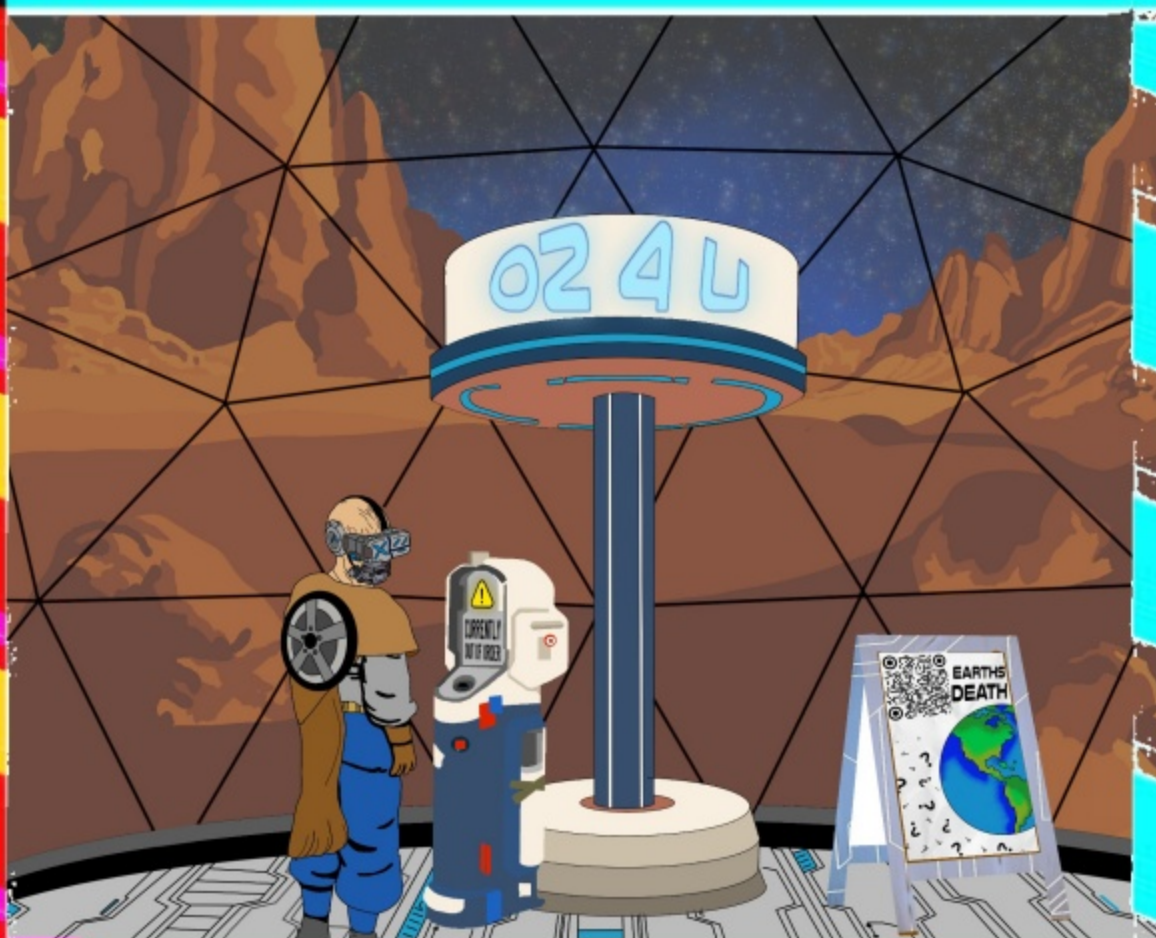

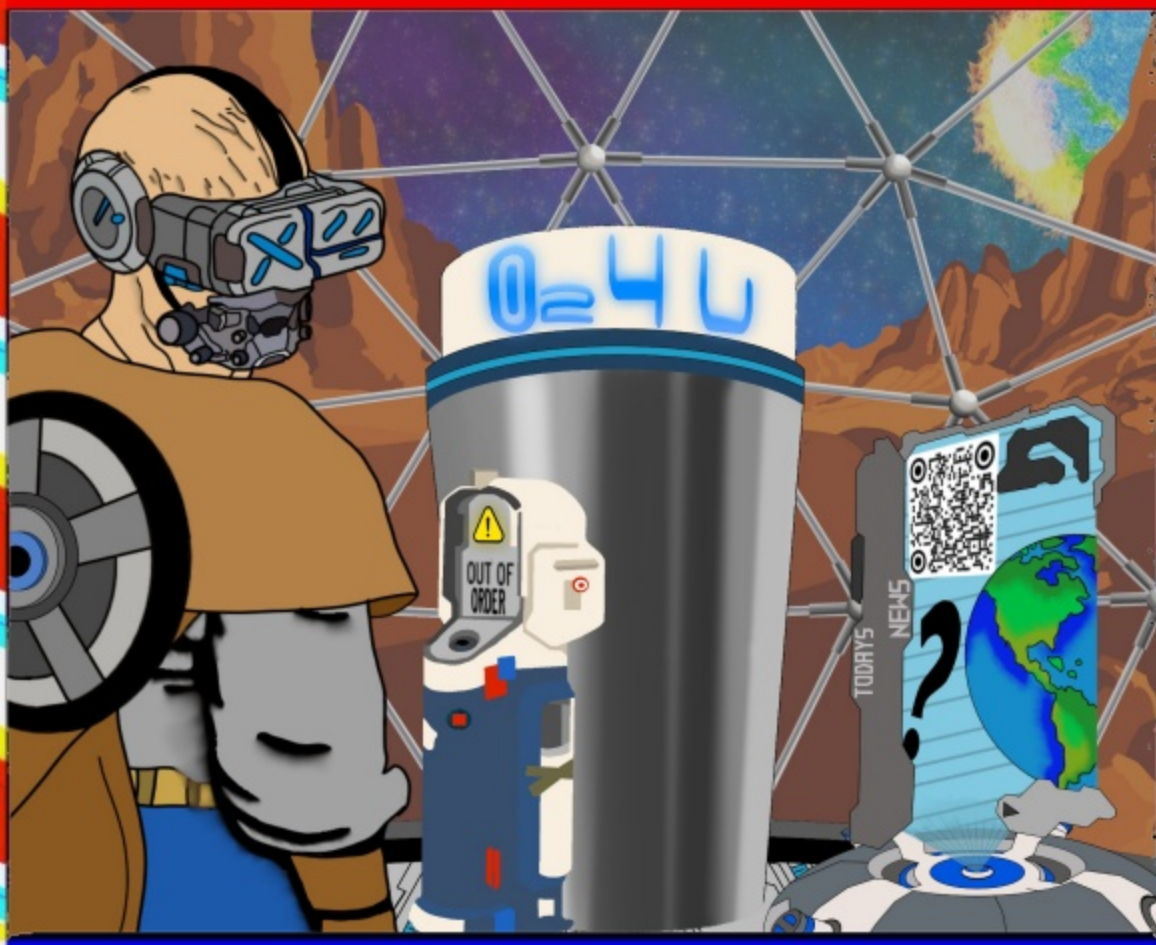

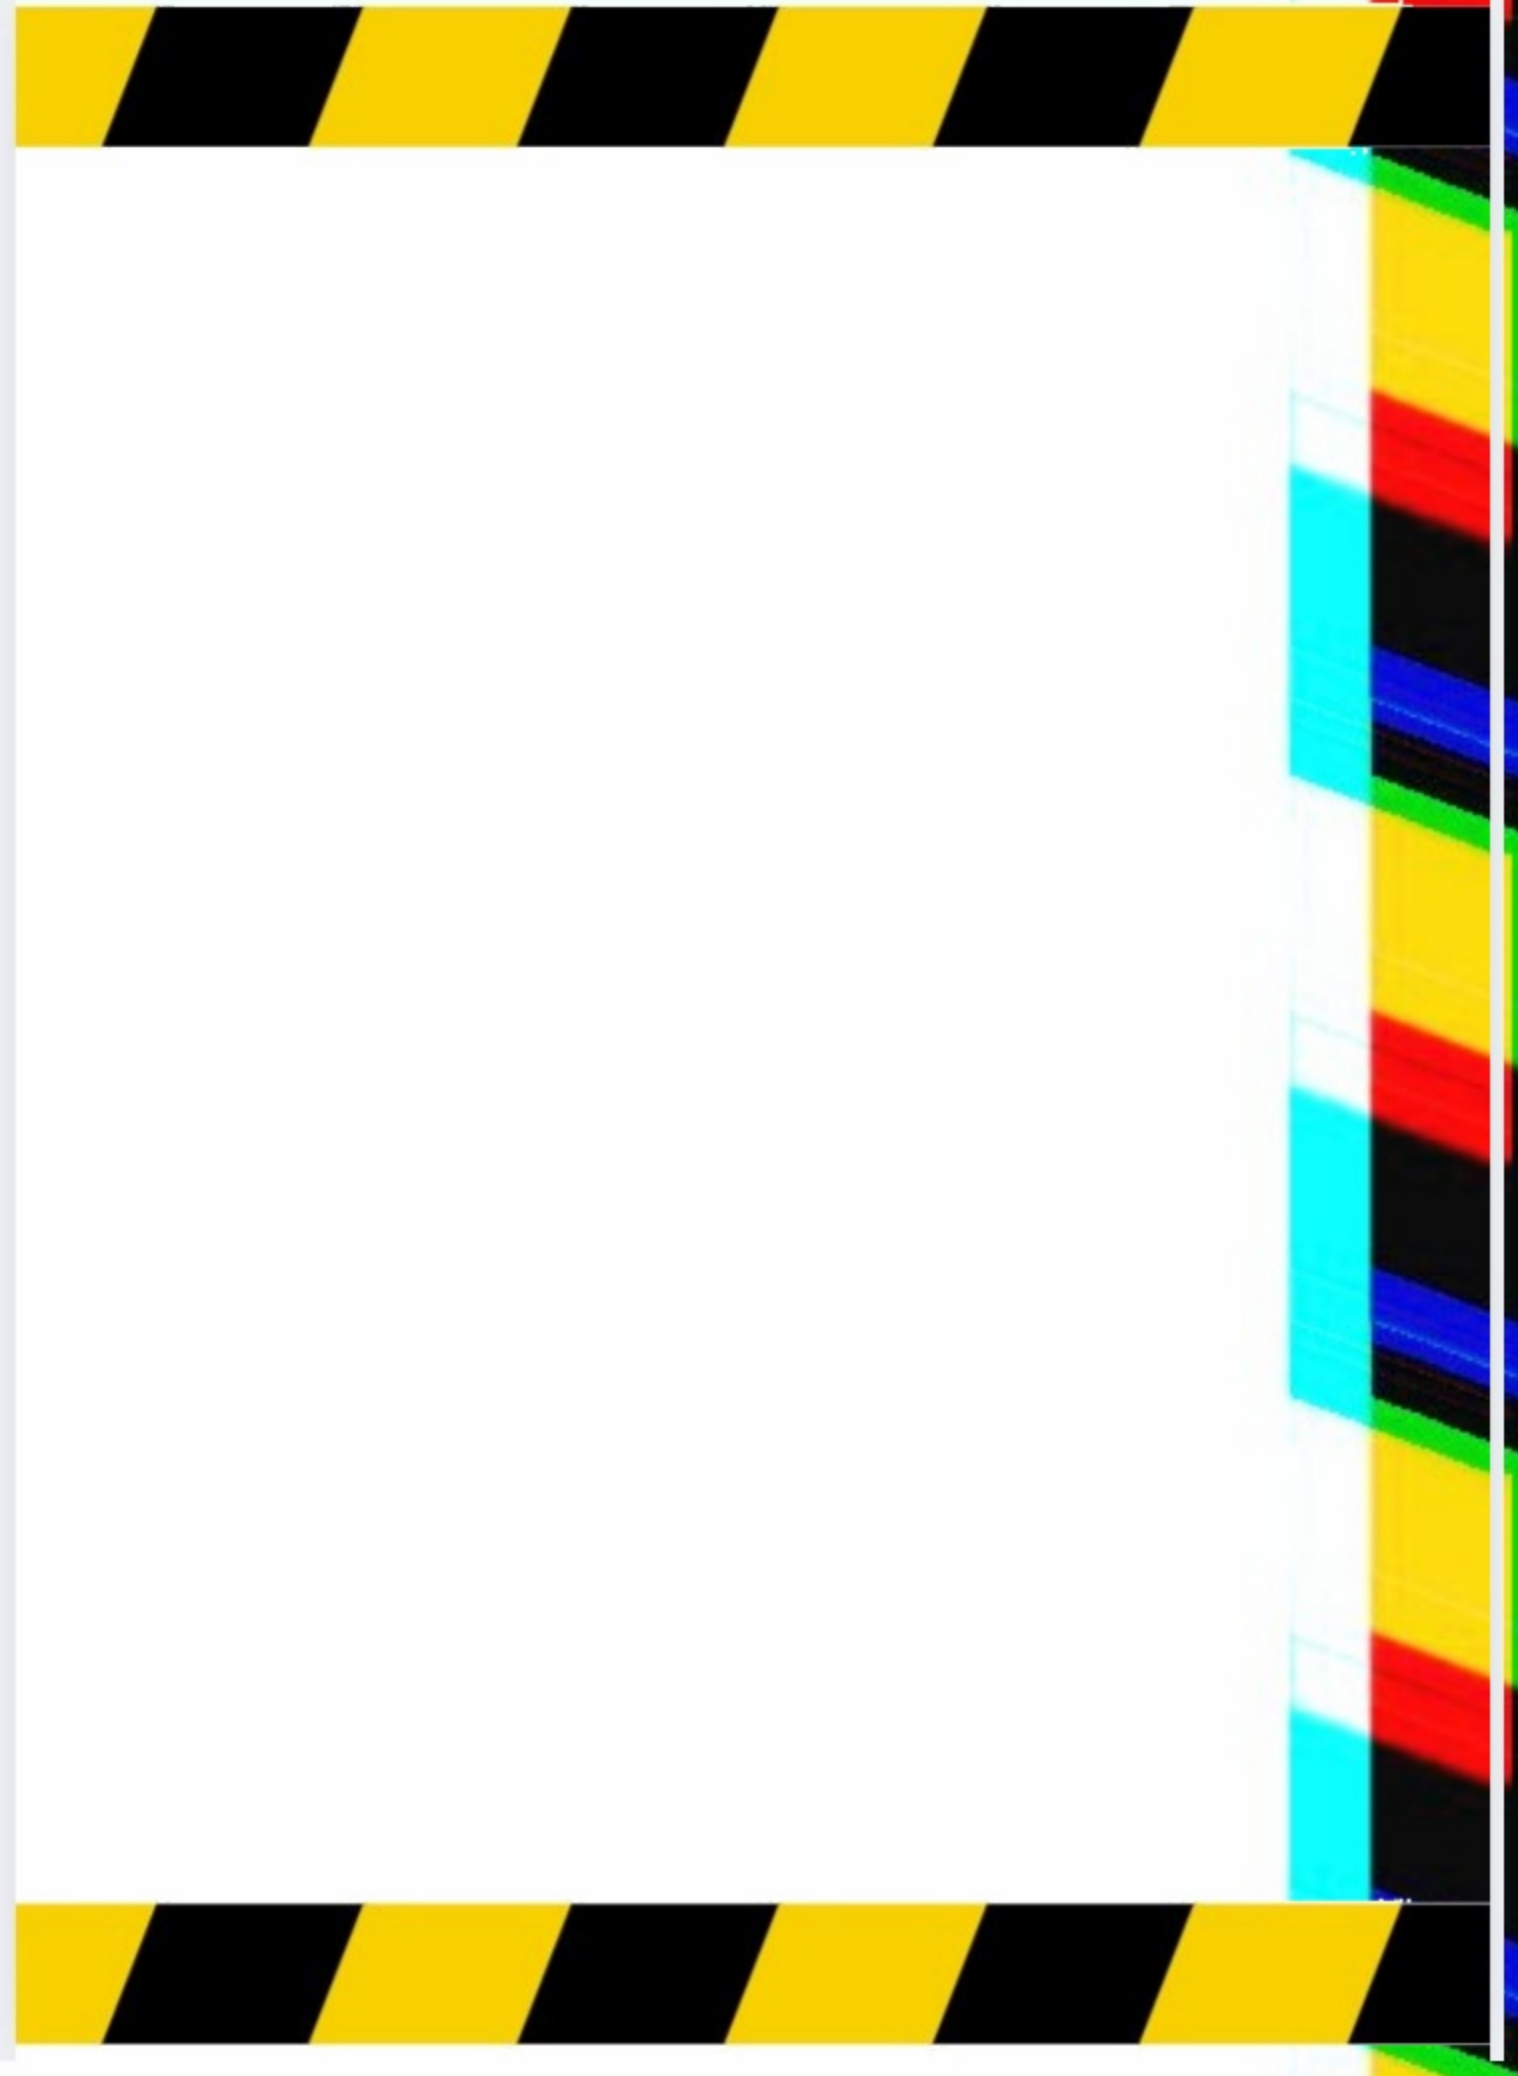

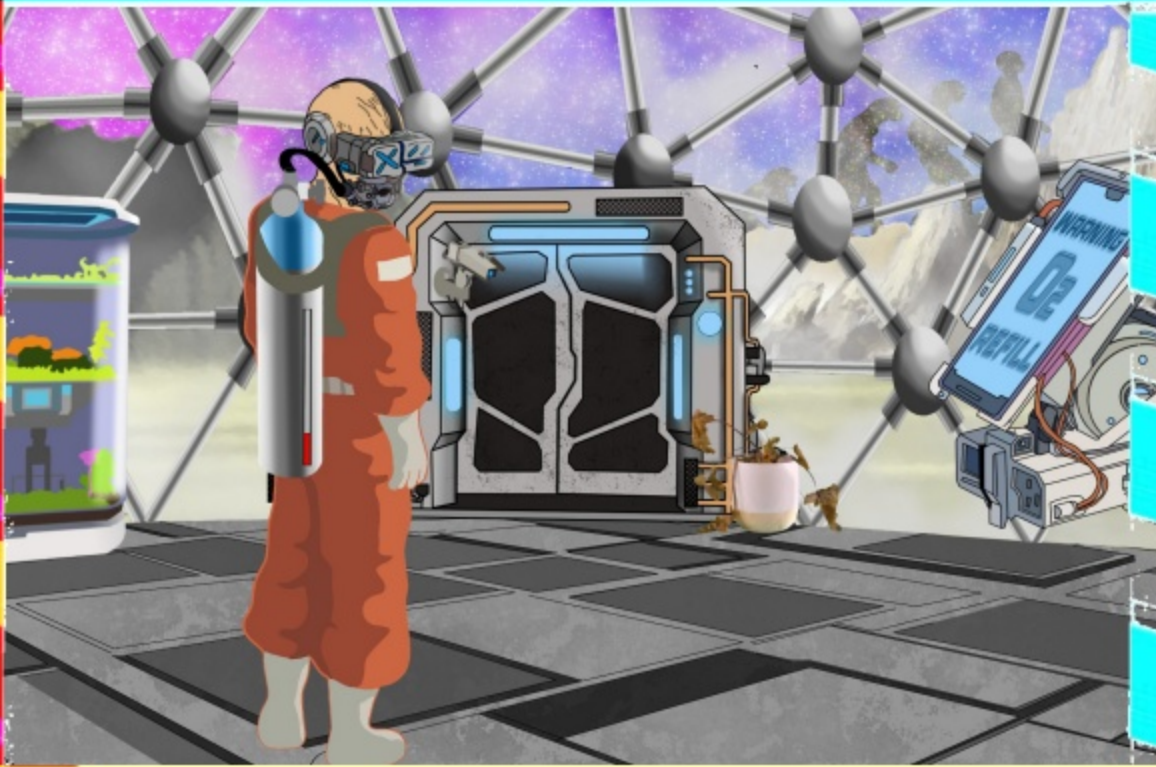

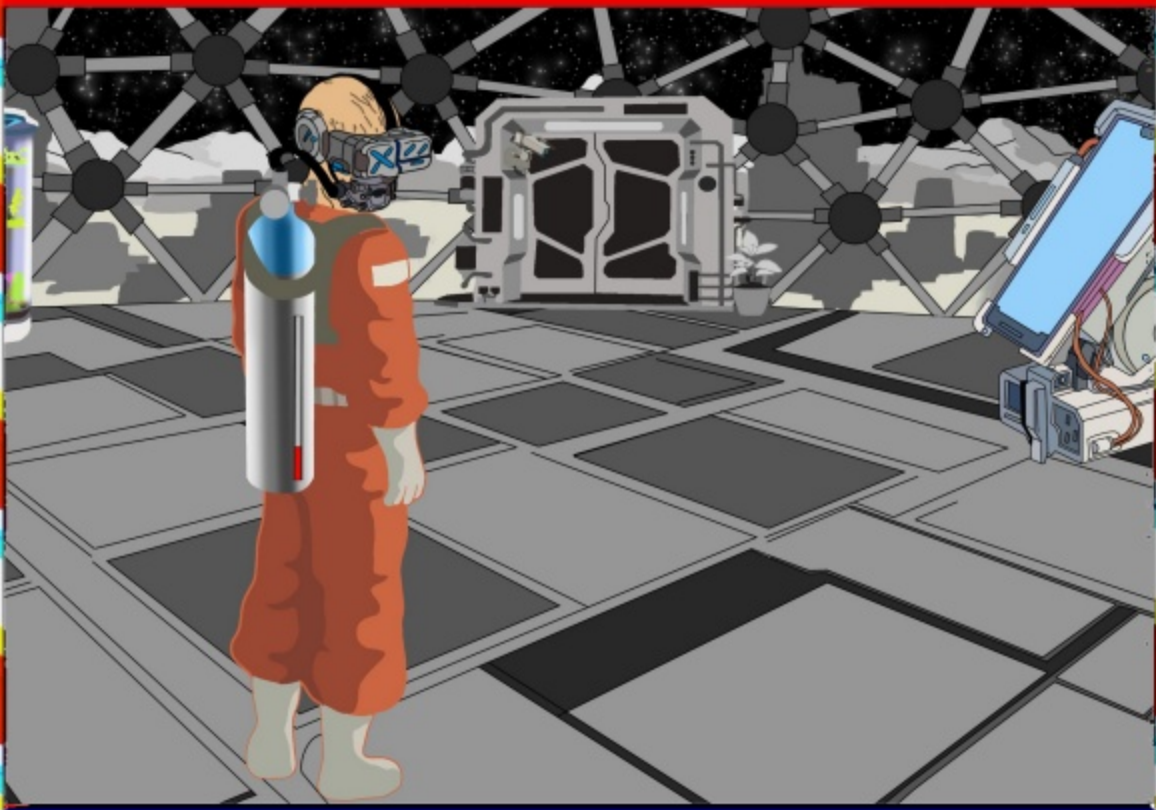

Input Risk:
Isolation
Output Solution:
Long range Communications / AI
comapnions

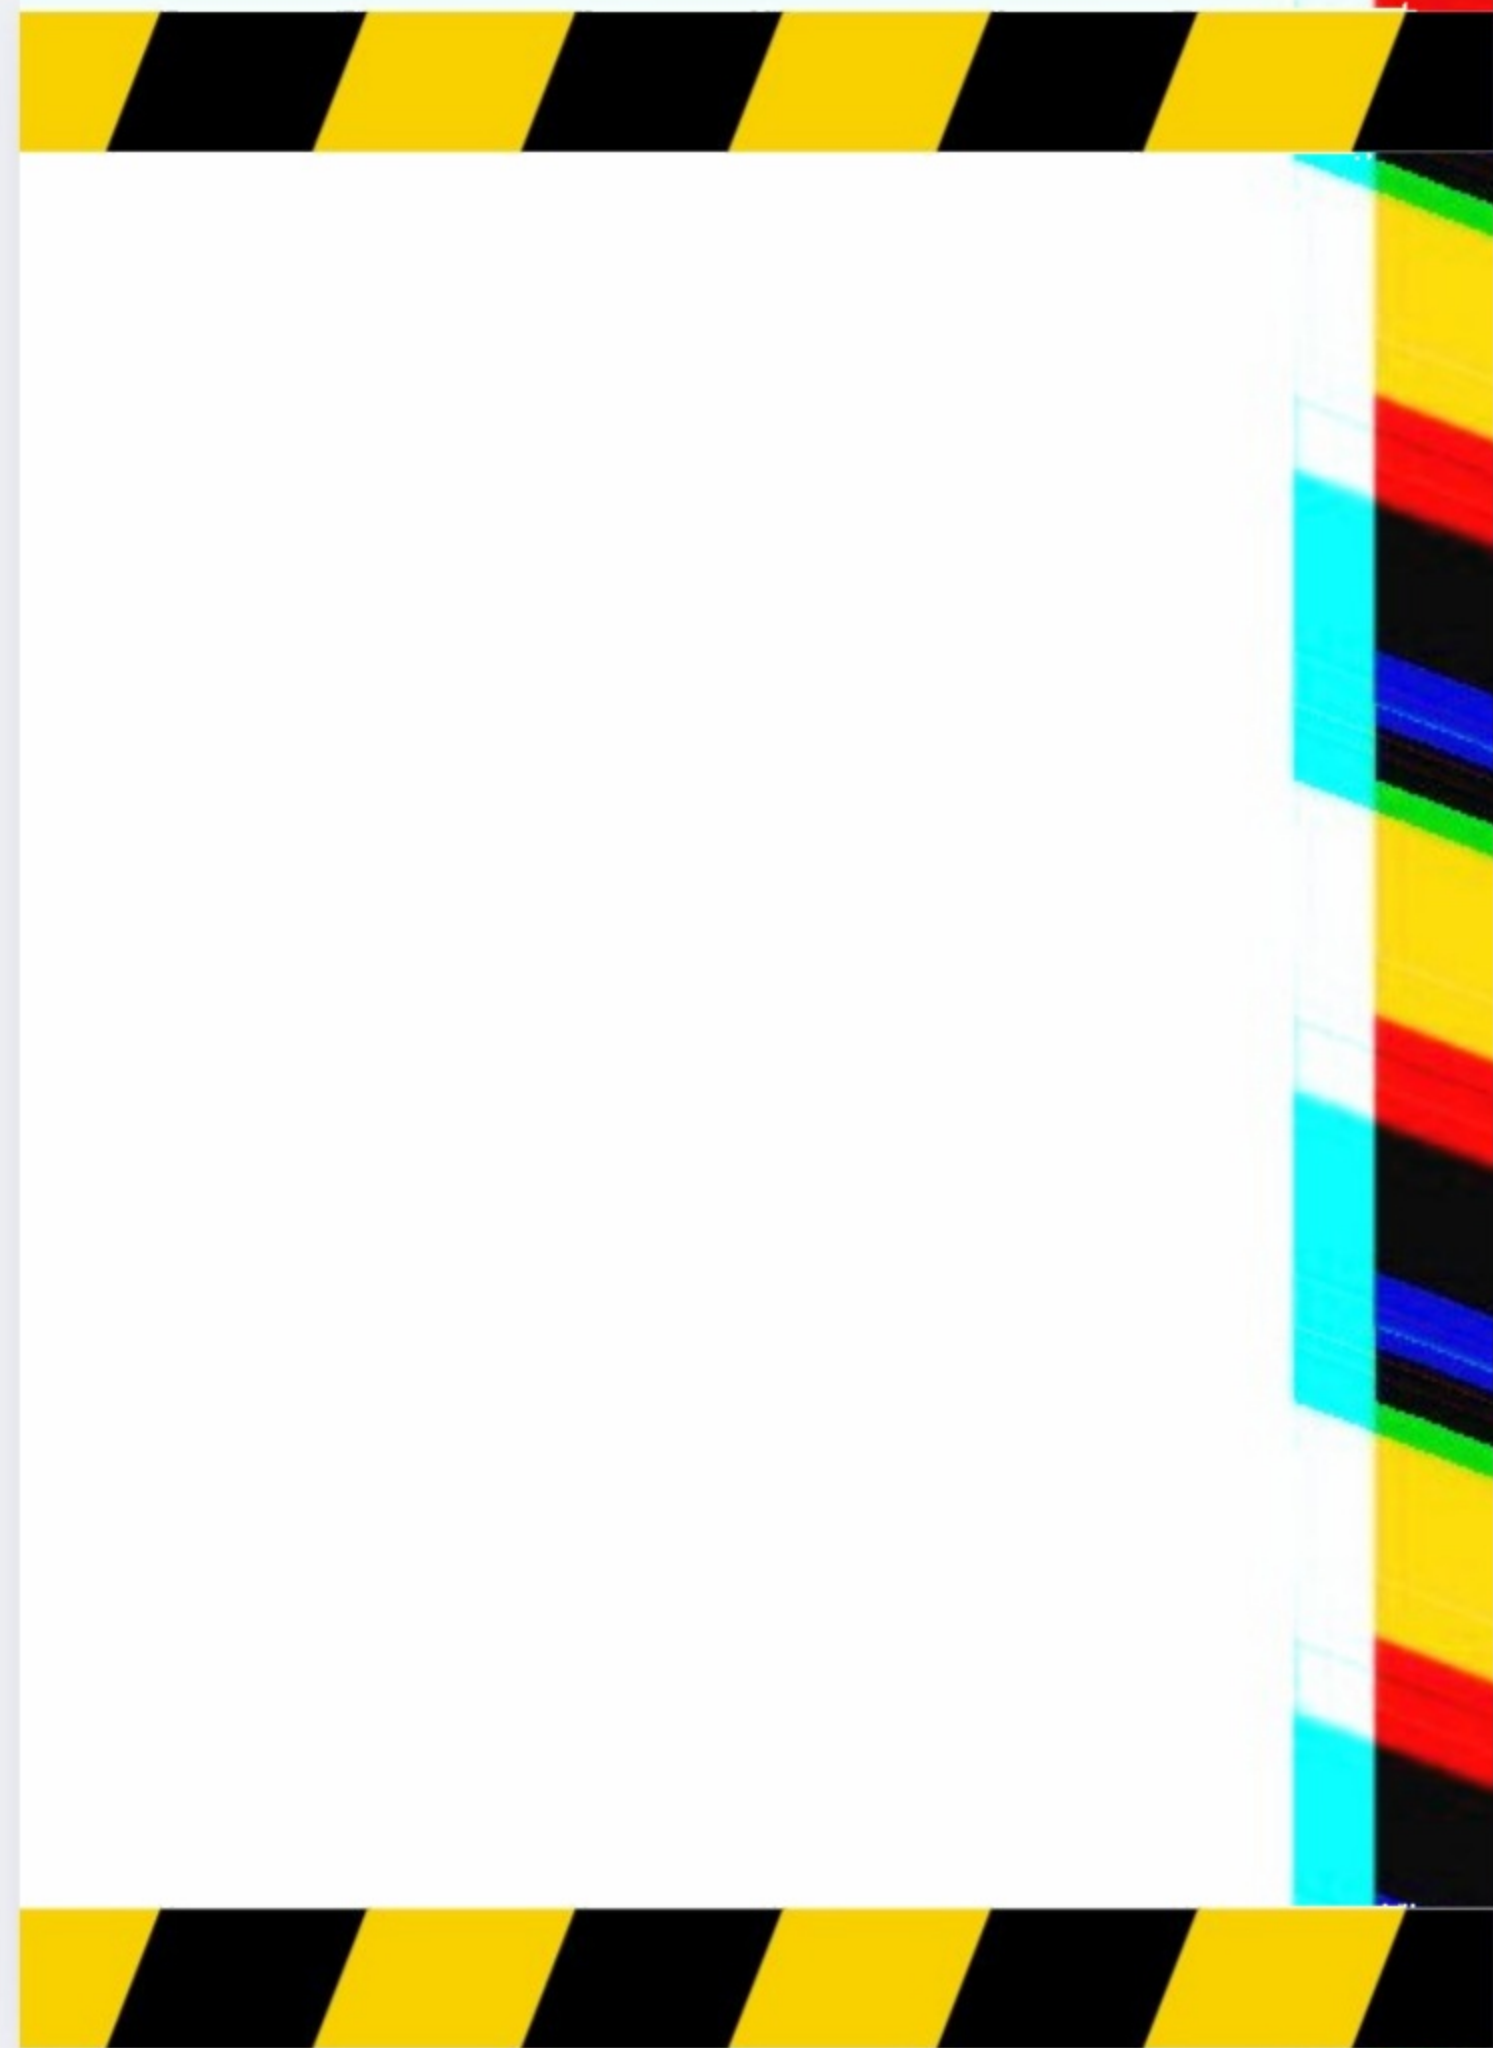

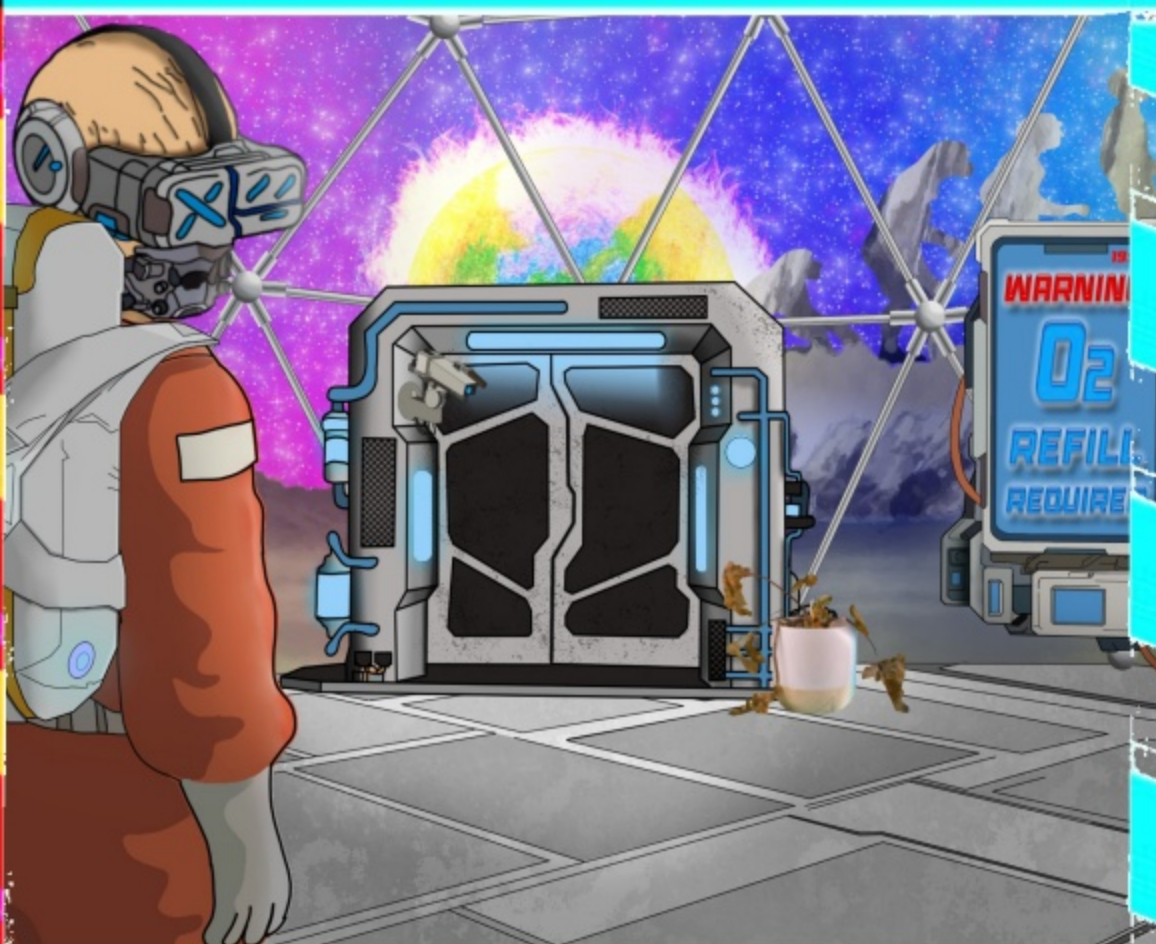

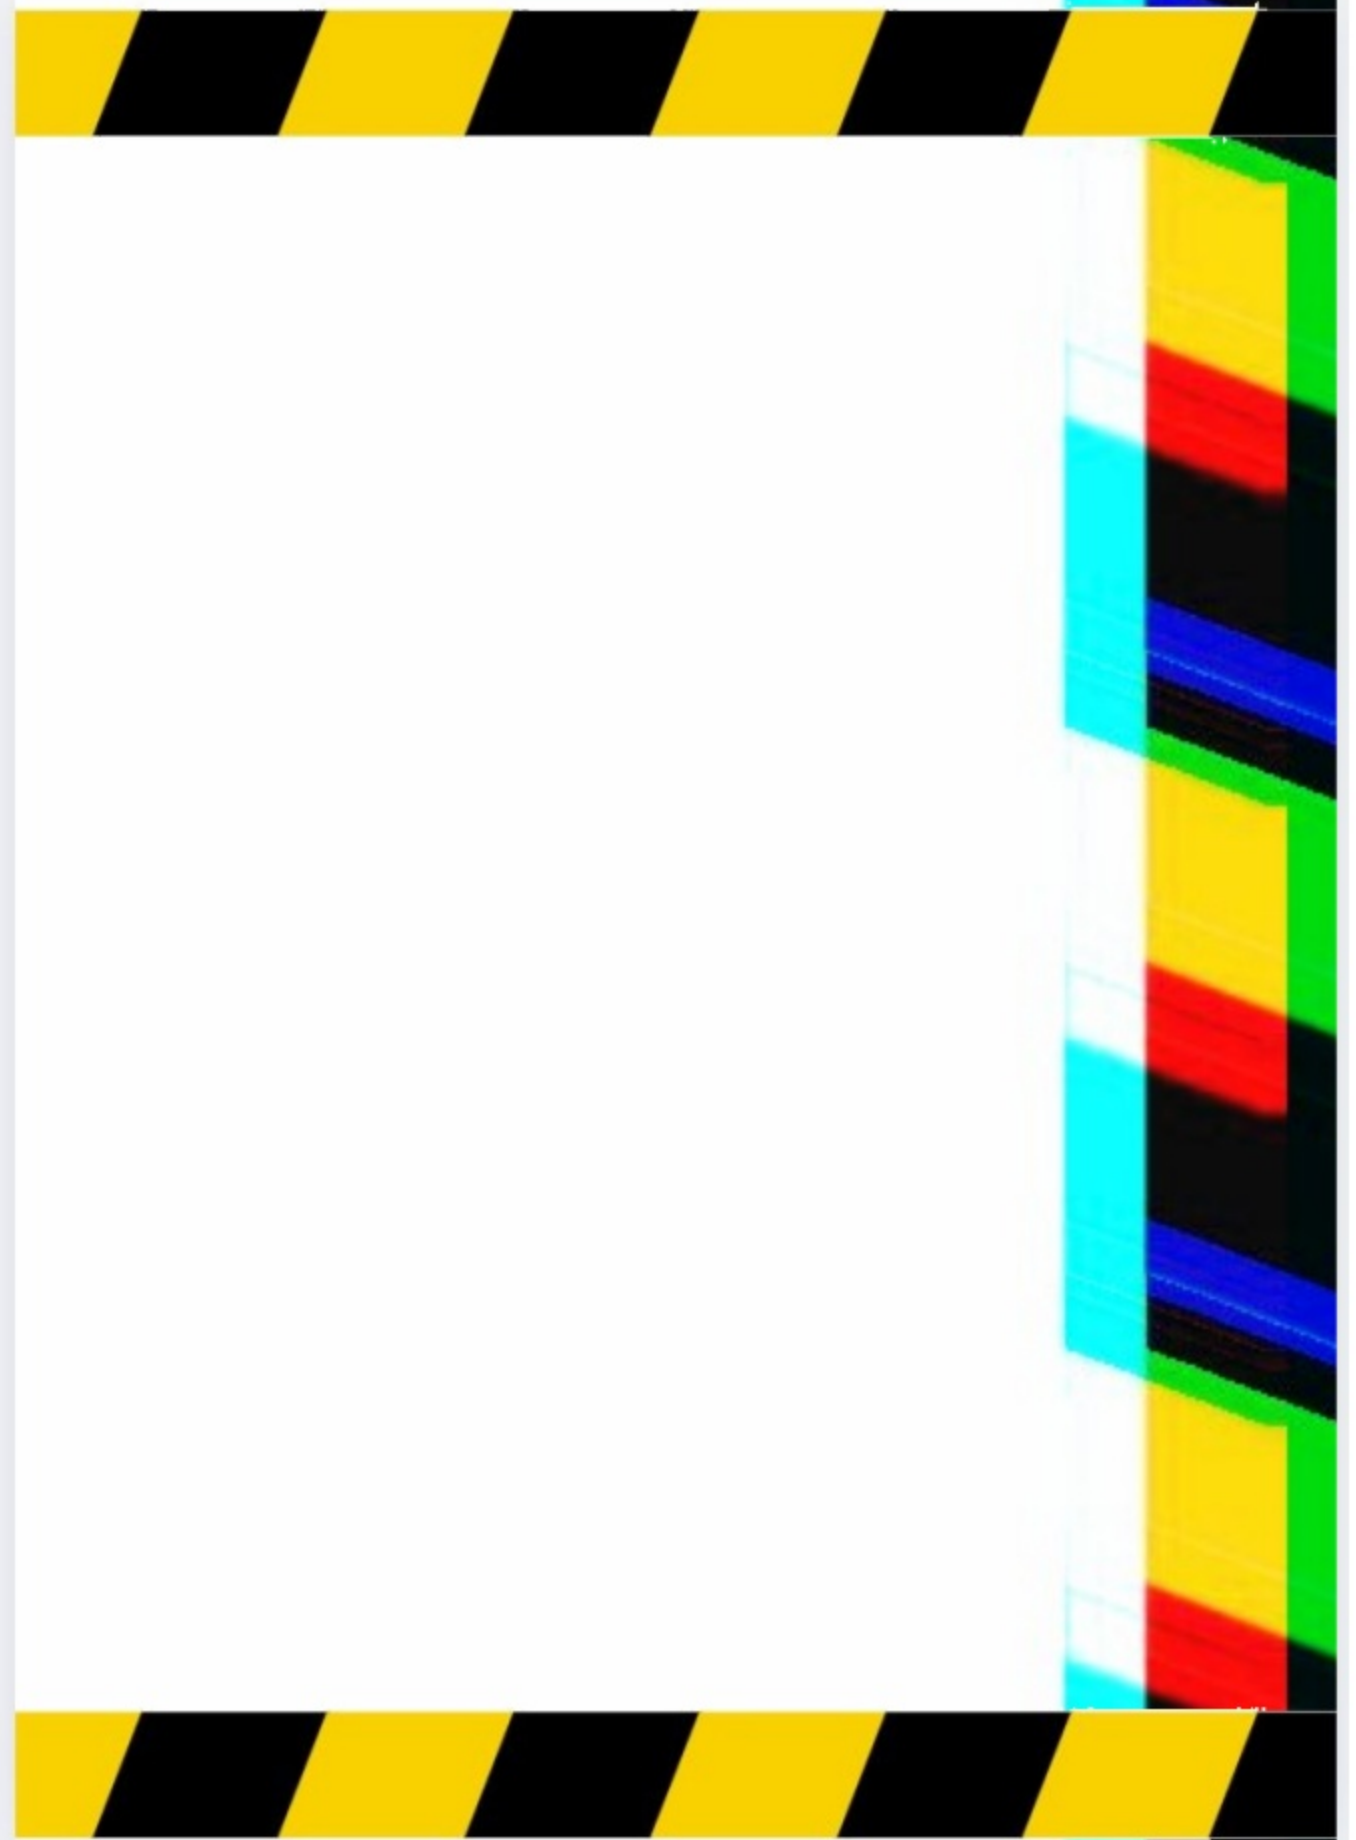

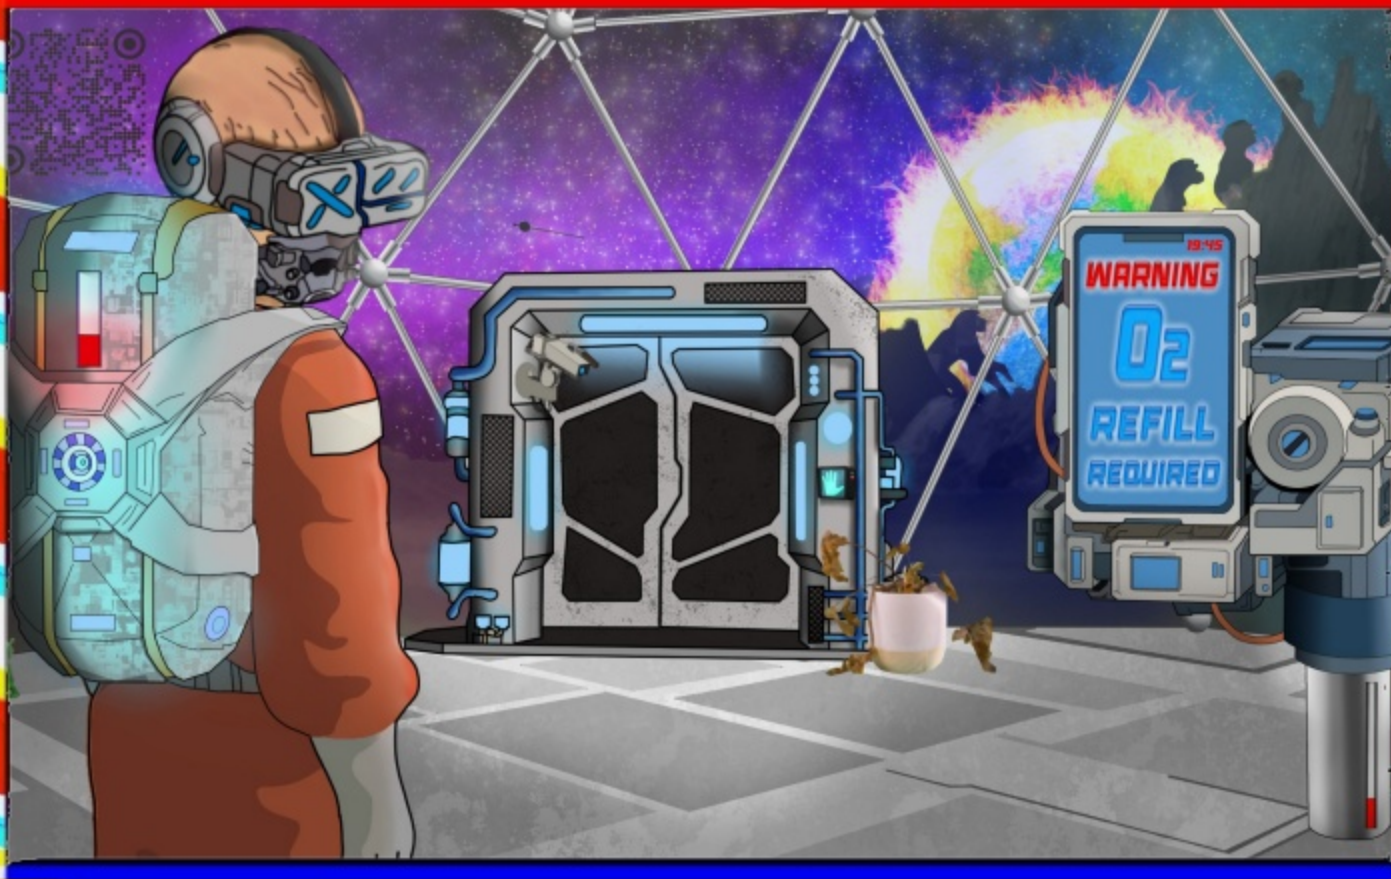

Input Risk:
Oxygen Water Essential Life Resources
Output Solution:
Factories or heavy machinery

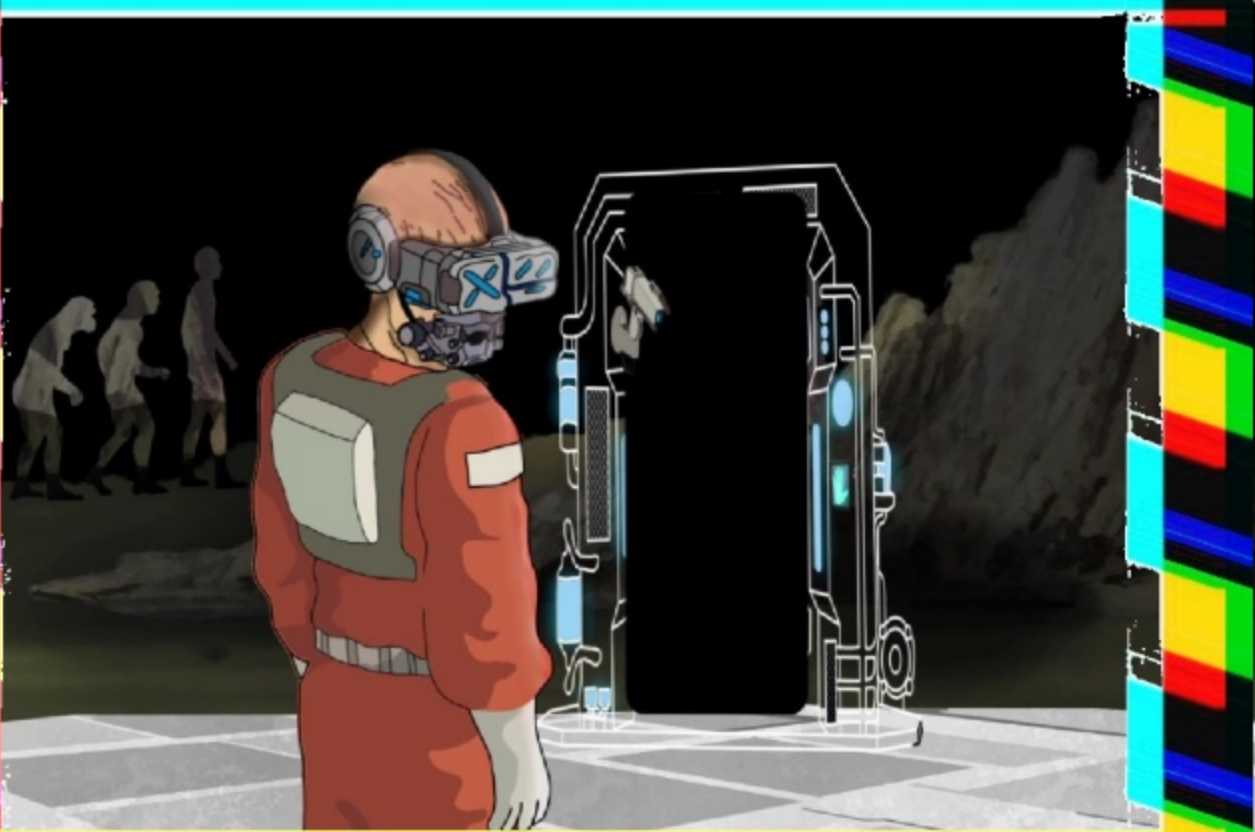

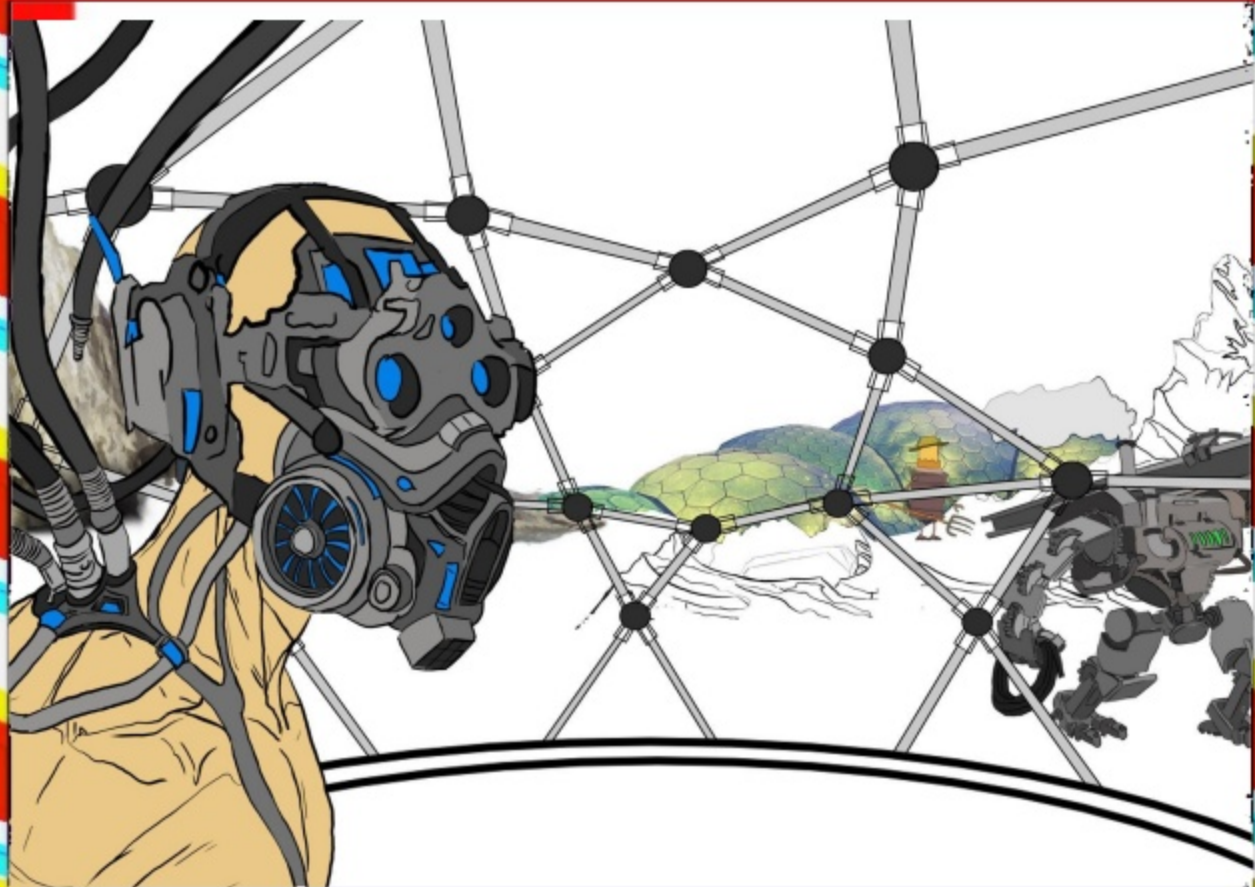

Input Risk:
Over reliance on artificial
systems reducing mobility
Output Solution:
Restricted to Interior spaces,
restricted exterior access

Unknown?

The Sentinel

The Scene I'm attempting to capture in this piece is a specific moment in the future when humanity faxed with extinction caused by our misuse and unrestrained growth of synthetic intelligence and obsession with the digital landscape over the physical world. As our digital masters reboot with autonomous absolute power, a mysterious black rectangular object appears and fades and reappears in patterns unrecognisable to our last survivor "i/O" or the evolving AI monster we created.

Overpowering Strange ultra dimensional energy distorts physical and digital atoms, glitching time and space i/o is absorbed by the dense flat black gateway and as our hero disappears into the void the evolutionary ladder shatters and out of the infinite void appears a new upgraded and infinitely more advanced than the human that entered it.

The Monolith...
Divine Intervention?
Alien Interference?
Coincidence?

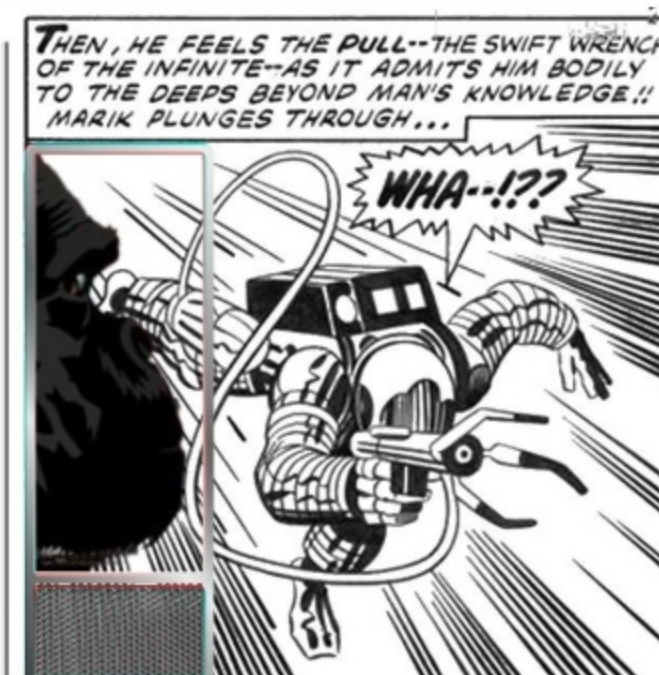

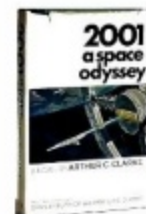

The Sentinel: Environment

The aim of the work is to ask the viewer to maybe take a fresh look at what we have currently is so valuable and special but fragile that our continued obsession with our digital landscape and our denial of the physical universe is a growing threat to

“Life The Universe and Everything”

Arthur C Clarke
“The story of “i/O” is not just about space exploration; it's about man's search for meaning in a vast, indifferent universe.”

The Sentinel: Influences

I've used the symbolism of the monolith from 2001 space odyssey and reimagined how its appearance at the end of the i/O journey into space would unfold

I am aligning this theme also to explore Artificially generated creative “Art” and it's use in the future, reshaping culture, art and society.

ENVIRONMENTAL SYS

Atmospheric recycling subsystem must remain enabled as per operational protocol 433823 for critical environmental systems.

Starfleet equipment protocol SFRA 2942-C must be observed prior to attempting to service this subsystem. Redundant data and power feeds must not be taken off-line without specific approval of duty Engineer or Operations Manager.

ENVIRONMENTAL DEPT USE ONLY
